Tue, 13 Nov 2018 00:22:00 GMT Chapter 3: Solutions of Homework Problems Vectors in Physics - We can represent vectors graphically as arrows and then the sum of two vectors is found (graphically) by joining the head of one to the tail of the other and then connecting head to tail for the combination, as shown in Fig. 1.1 . The sum of two (or more) vectors is often called the resultant. We can add vectors in any order we want:  $A+B = B+A$ . The answer "Go three miles" is not very helpful. More useful would be "Go three miles south." A quantity having both size (magnitude) and direction is called a vector quantity. Vectors are not just about position. Such quantities as velocity, acceleration, force and momentum all have both a size and a direction.
